Art Unit: 2419

#### **DETAILED ACTION**

#### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicants' submission filed on 11/13/08 has been entered.

## Response to Arguments

2. Applicant's arguments with respect to claims 1, 2, 4, 5 have been considered but are moot in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2419

5. Claims 1, 2, 4, 5, 7-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S Patent No. to Spiegel et al (US 5,649,108) in view of Kramer et al (US 5,191,650).

Regarding claim 1, Spiegel et al disclose a method for determining the return path of a packet in a network, the network comprising a plurality of nodes and a plurality of links between the nodes, the method comprising the acts of sending a packet from a source node to a destination node, via at least an intermediate node (see Figs. 1, 7A-7D, e.g., node A is a source node; nodes B, C, D, E, F are intermediate nodes. Node G is a destination node), when the packet visits the intermediate node, storing information in the intermediate node for deriving a return path (see col.10, lines 59-65; col. 11, lines 31-67; e.g., Forwarding Table 20 of each intermediate nodes B, D sets and stores information of VCI(i), OP/ID and VCI(o) for receiving a return packet and a NACK packet), and when the packet is being returned to the source node using the stored information for deriving the return path, wherein the information stored in the intermediate node comprises an identifier of the packet and information that encodes an output port of the intermediate node to be used for returning the packet (see col. 10, lines 59-65; col. 11, lines 31-67; e.g., Forwarding Table 20 of each intermediate nodes B, D sets and stores information of VCI(i), OP/ID and VCI(o) for receiving a return packet and a NACK packet, and VCI(i) corresponds to an identifier of the packet and OP/ID corresponds to information that encodes an output port of the intermediate node).

Spiegel et al do not teach "wherein no information for deriving the return path is stored in the packet when the packet visits the intermediate node".

Kramer et al teach the above recited limitations (see col. 4, line 58 – col. 5, line 5, e.g., information in the control blocks are stored at the intermediate nodes for deriving the

Art Unit: 2419

return path, wherein no information for deriving the return path is stored in the visited packet).

At the time of invention, it would have been obvious to a person of ordinary skilled in the art to incorporate the teaching of Kramer et al in Spiegel et al by using the information in the control blocks for deriving the return path as taught by Kramer et al. The suggestion/motivation would have been to reduce the packet size by reducing return path information stored in the packet.

Regarding claim 2, Spiegel et al disclose an act of storing information for deriving the return path in each node visited by the packet for deriving the return path, when sending the packet from the source node to a destination node. (see col.10, lines 59-65; col. 11, lines 31-67; e.g., Forwarding Table 20 of each intermediate nodes B, D sets and stores information of VCI(i), OP/ID and VCI(o) for receiving a return packet and a NACK packet).

**Regarding claim 4**, see similar rejection to claim 1. Furthermore, the network node shown in Fig. 2 includes an integrated circuit (see col.5, lines 42-62).

**Regarding claim 5**, see similar rejection to claim 2.

**Regarding claim 7,** Spiegel et al disclose that the network is a packet-switched network (see Fig. 1, col. 5, lines 37-42).

**Regarding claim 8,** Spiegel et al disclose that the packet is sent from the source node to the destination node using destination routing (see Fig. 2, Figs. 7A-7D, col. 5, lines 43-62).

**Regarding claim 9**, see similar rejection to claim 7.

**Regarding claim 10**, see similar rejection to claim 8.

Regarding claim 11, see similar rejection to claim 1.

**Regarding claim 12**, see similar rejection to claim 1.

Regarding claim 13, see similar rejection to claim 1. Spiegel et al further disclose the information stored in the intermediate node comprises an identifier of the packet and information that encodes an input port of the intermediate node (see col. 10, lines 59-65; col. 11, lines 31-67; e.g., Forwarding Table 20 of each intermediate nodes B, D sets and stores information of VCI(i), IP/ID and VCI(o) for receiving a return packet and a NACK packet, and VCI(i) corresponds to an identifier of the packet and IP/ID corresponds to information that encodes an input port of the intermediate node).

**Regarding claim 14**, see similar rejection to claim 7.

**Regarding claim 15**, see similar rejection to claim 8.

#### Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Please refer to the enclosed PTO-892 form.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Minh-Trang Nguyen whose telephone number is (571)270-5248. The examiner can normally be reached on Monday to Friday 7:30AM to 5:00PM EST, first Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chirag G. Shah can be reached on 571-272-3144. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
